

**Through script Installing Webserver and
Creating a Webpage and
Redirecting the VM 80port to 8090 on the local host**

Step 1: creating a bash script called apachescript.sh

Command: touch scriptapache.sh

Step2: Installing Apache web server and creating a webpage through script

Script commands:

```
#!/bin/bash
sudo apt install apache2
echo "<html><body><h1>Webpage created by Siva through script</h1></body><html>">
/var/www/html/index.html
```

Step 3: Forwarding the VM network port 80 to 8090 on localhost

First need to edit the vagrant file and insert the below command

```
echo "<html><body><h1>Webpage created by Siva through script</h1></body><html>">
/var/www/html/index.html
```

Final Output
